PROFESSIONAL SUMMARY

Computer Science Engineering student (graduating May 2026) with hands-on experience in full-stack web development, machine learning, IoT systems, and data analytics. Proficient in Python, Java, Flask, Firebase, TensorFlow, OpenCV, and Power BI. Proven ability to design, build, and deploy end-to-end applications with real-world usage. Seeking a software engineering or data/AI role to apply strong problem-solving skills and technical expertise.

TECHNICAL SKILLS

Programming Languages: Python, Java, HTML5, CSS3

Libraries & Frameworks: Flask, TensorFlow, OpenCV, NumPy, Pandas, Matplotlib

Databases & Backend: MySQL, MongoDB

Data Visualization & BI Tools: Power BI, Tableau, Excel

Deployment & Tools: Vercel, Git, GitHub, Google Colab

Core Competencies: Full-Stack Development, Machine Learning, Deep Learning, IoT Systems, Data Analytics, REST APIs, Authentication & Session Management

EDUCATION

Bachelor of Engineering – Computer Science | *ACS College of Engineering* Dec 2022 – May 2026

SGPA: 8.5 / 10 | Affiliated to Visvesvaraya Technological University (VTU)

Pre-University (PCMB) | *Narayana PU College* Jun 2020 – May 2022

Aggregate: 86%

SSLC | *Bunt's Sangha RNS Vidyaniketan* Mar 2020

Aggregate: 84%

PROJECTS

YarnTale – Profit Calculator Web App | *Python | Flask | Firebase | Vercel* Jan-2026-Ongoing

- Built and deployed a full-stack business management application for a small handcraft business; live at yarntale.vercel.app.
- Implemented secure session-based authentication with role-based access control — admin users get full CRUD access while demo accounts are restricted to read-only view.
- Designed a real-time profit-splitting dashboard using Firebase Firestore that automatically calculates and distributes earnings across team members based on configurable business logic.
- Built complete product lifecycle management (add, edit, delete, view) with server-side form validation and user-friendly error handling.
- Deployed on Vercel with environment-variable-based configuration for secure credential management in production.

Lip-to-Speech Recognition System | *Python | OpenCV | TensorFlow | Flask* Aug 2025 – Jan 2026

- Built a vision-based AI system that converts lip movements into speech, improving accessibility for hearing-impaired users.
- Implemented OpenCV for real-time lip region detection and a TensorFlow LSTM-based deep learning model for sequence-to-text conversion.
- Integrated Flask to deploy the model as a web application, enabling real-time inference via browser.
- Achieved accurate lip movement classification across diverse lighting conditions using data augmentation techniques.

Vehicle Actuated Traffic Control System | *IoT Sensors | C++ | Embedded Systems* Dec 2024

- Designed a smart traffic signal controller using IoT sensors to detect real-time vehicle presence at intersections.
- Optimized signal timing dynamically based on vehicle density, reducing idle time by 25% compared to fixed-cycle systems.
- Implemented the control logic in C++ for microcontroller-based hardware deployment.

PROFESSIONAL EXPERIENCE

Advanced Software Engineering Job Simulation | *Walmart (via Forage)* Oct 2024 – Dec 2024

- Completed Walmart's Advanced Software Engineering simulation, working on industry-realistic tasks designed by Walmart's engineering team.
- Designed software architecture solutions and developed relational database models simulating real-world engineering challenges.
- Gained exposure to scalable system design principles and best practices in enterprise software development.

CERTIFICATIONS

- Java Basics – QSpiders
- Generative AI – Edunet Foundation
- Building Generative AI Models – NxtWave
- Essentials of Cloud Computing – Infosys Springboard
- Machine Learning Beginner, Fundamentals & Implementation – Infosys Springboard
